Notation	8
0 Primes and the Fundamental Theorem of Arithmetic	11
0.1 Divisibility and primes	11
0.2 The Fundamental Theorem of Arithmetic	13
0.3 The infinitude of primes	15
0.4 Exercises	17
1 Arithmetic functions I: Elementary theory	19
1.1 Introduction and basic examples	19
1.2 Additive and multiplicative functions	21
1.3 The Moebius function	24
1.4 The Euler phi (totient) function	28
1.5 The von Mangoldt function	29
1.6 The divisor and sum-of-divisors functions	30
1.7 The Dirichlet product of arithmetic functions	31
1.8 Exercises	39
2 Arithmetic functions II: Asymptotic estimates	41
2.1 Big oh and small oh notations, asymptotic equivalence	42
2.1.1 Basic definitions	42
2.1.2 Extensions and remarks	43
2.1.3 Examples	44
2.1.4 The logarithmic integral	48
2.2 Sums of smooth functions: Euler's summation formula	50
2.2.1 Statement of the formula	50
2.2.2 Partial sums of the harmonic series	51
2.2.3 Partial sums of the logarithmic function and Stirling's formula	52

2.2.4	Integral representation of the Riemann zeta function	55
2.3	Removing a smooth weight function from a sum: Summation by parts	56
2.3.1	The summation by parts formula	56
2.3.2	Kronecker's Lemma	58
2.3.3	Relation between different notions of mean values of arithmetic functions	60
2.3.4	Dirichlet series and summatory functions	64
2.4	Approximating an arithmetic function by a simpler arithmetic function: The convolution method	66
2.4.1	Description of the method	66
2.4.2	Partial sums of the Euler phi function	68
2.4.3	The number of squarefree integers below x	70
2.4.4	Wintner's mean value theorem	71
2.5	A special technique: The Dirichlet hyperbola method	72
2.5.1	Sums of the divisor function	72
2.5.2	Extensions and remarks	74
2.6	Exercises	76
3	Distribution of primes I: Elementary results	81
3.1	Chebyshev type estimates	81
3.2	Mertens type estimates	88
3.3	Elementary consequences of the PNT	92
3.4	The PNT and averages of the Moebius function	94
3.5	Exercises	103
4	Arithmetic functions III: Dirichlet series and Euler prod- ucts	107
4.1	Introduction	107
4.2	Algebraic properties of Dirichlet series	108
4.3	Analytic properties of Dirichlet series	115
4.4	Dirichlet series and summatory functions	123
4.4.1	Mellin transform representation of Dirichlet series	123
4.4.2	Analytic continuation of the Riemann zeta function	126
4.4.3	Lower bounds for error terms in summatory functions	128
4.4.4	Evaluation of Mertens' constant	130
4.5	Inversion formulas	133
4.6	Exercises	139

5	Distribution of primes II: Proof of the Prime Number Theorem	141
5.1	Introduction	141
5.2	The Riemann zeta function, I: basic properties	147
5.3	The Riemann zeta function, II: upper bounds	148
5.4	The Riemann zeta function, III: lower bounds and zero-free region	151
5.5	Proof of the Prime Number Theorem	156
5.6	Consequences and remarks	161
5.7	Further results	164
5.8	Exercises	169
6	Primes in arithmetic progressions: Dirichlet's Theorem	171
6.1	Introduction	171
6.2	Dirichlet characters	173
6.3	Dirichlet L-functions	181
6.4	Proof of Dirichlet's Theorem	182
6.5	The non-vanishing of $L(1, \chi)$	186
5.9	Exercises	171
A	Some results from analysis	195
A.1	Evaluation of $\sum_{n=1}^{\infty} n^{-2}$	195
A.2	Infinite products	196
